# 1000 MOTION PRESETS FOR ANIMATIONMASTER
by [Artorius](#)

This item is a pack containing what we believe to be the most useful motion presets for [AnimationMaster](#), a free plugin for quicker animating in Adobe Photoshop.
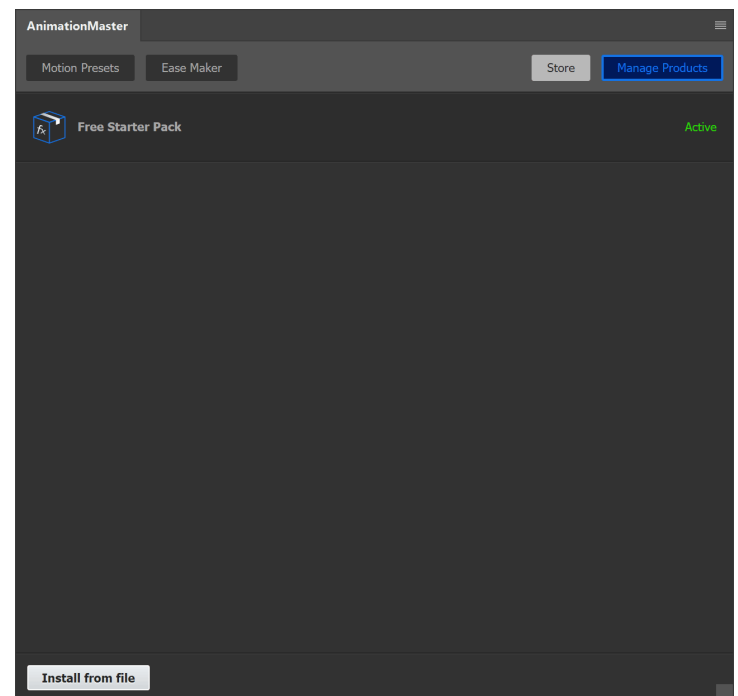

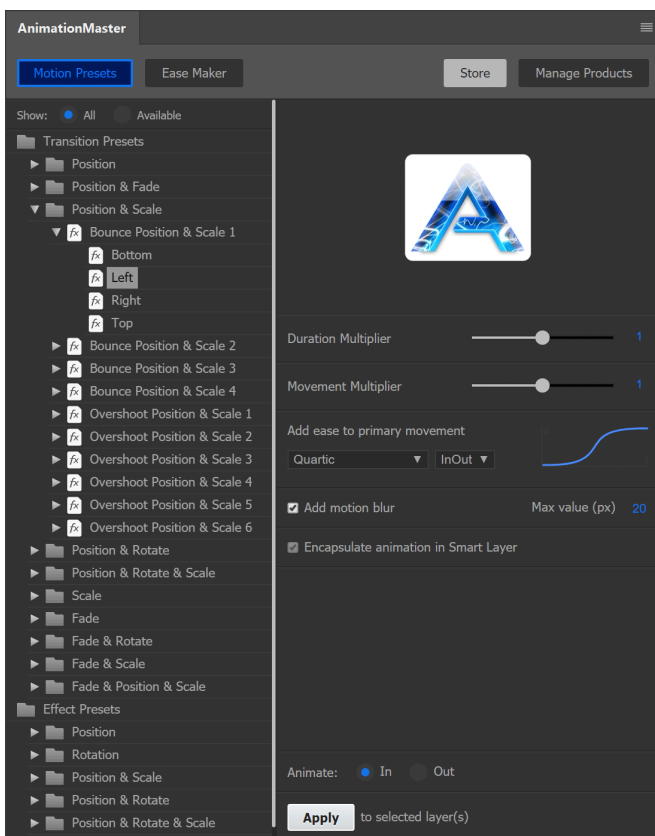

## Installing the presets file

The presets come in an AnimationMaster presets file (.ampf) and can be installed from inside the plugin directly.

This guide considers AnimationMaster has already been installed. If you need to install the plugin first or want to know how to use the plugin, please see the [AnimationMaster Help Center](#).

To install the presets file, open the plugin from *Window menu – Extension – AnimationMaster,* go to *Manage Products* and click *Install from file*.

You will be prompted to select the .ampf presets file, then your purchase code will be required. [Where is my purchase code?](#) An internet connection is needed.

AnimationMaster will announce the product has been activated and it will require to reopen the plugin so the installed product (presets file) is displayed.

On reopening, the *Manage Product* tab will display the Free Starter Pack and the name of the recently installed product.

In the *Motion Presets* tab, you can switch from *Show All* to *Show Available*. This will display only the presets you have active/licensed.
