

How to Install Lightroom Presets

1. First, download the zip file(s) that contain the presets.
|
2. Once you have the zip file(s) downloaded, you will need to unzip them prior to installing the presets.

On a Mac, you can simply double-click the zip file(s) to unzip.

On Windows, right-click and choose "Extract All". You have the option to save the presets wherever you choose on your computer. Save them someplace that you will easily remember for the next step.

3. To install the presets, open Lightroom and make sure you are in the Develop screen.

On the left side of the screen, in the presets list, right-click on "User Presets" and choose "Import".

Browse to where you have saved the unzipped presets, select them, and then click "Open". They are now installed.

4. Alternate Installation Method

For Windows: Once you have the files unzipped. Select them and then drag and drop them to the following location on your computer:

C:\Users\[user name]\AppData\Roaming\Adobe\Lightroom\Develop Presets

You can then start/restart Lightroom and they will be installed.

For Mac: Select the unzipped files and then drag and drop them here: /
Library/Application Support/Adobe/Lightroom/Develop Presets

Start/restart Lightroom
