

v1.0.0

URANUS TOOL

• SCRIPT METHOD GUIDE •

01. Prepar your image:

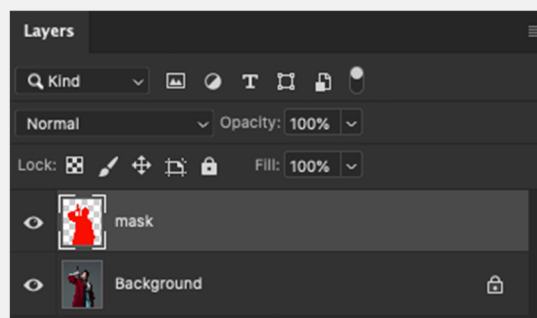

Open your image, and create a perfect mask in a new layer and name it “ mask ”.

you can create a mask easy and fast using the 03 methods below:

01. Select your image and go to: **Select >> Subject**. then photoshop will detect the focus subject in your image and it will select it, then copy and past it in a new empty layer and name it “ **mask** ”.

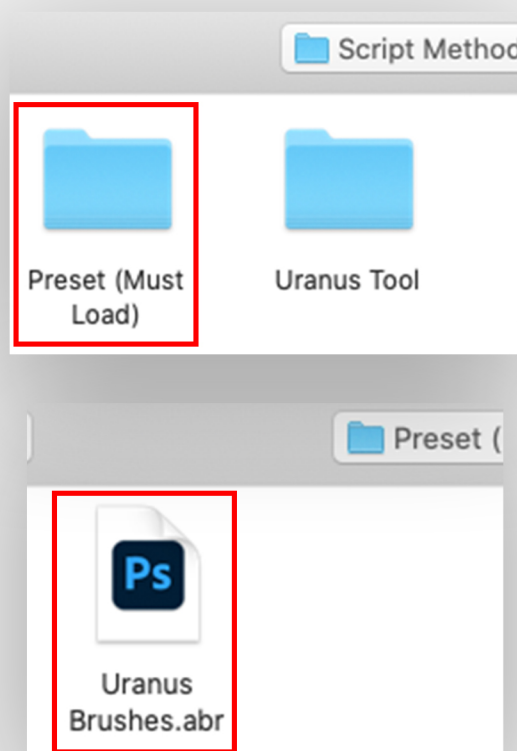

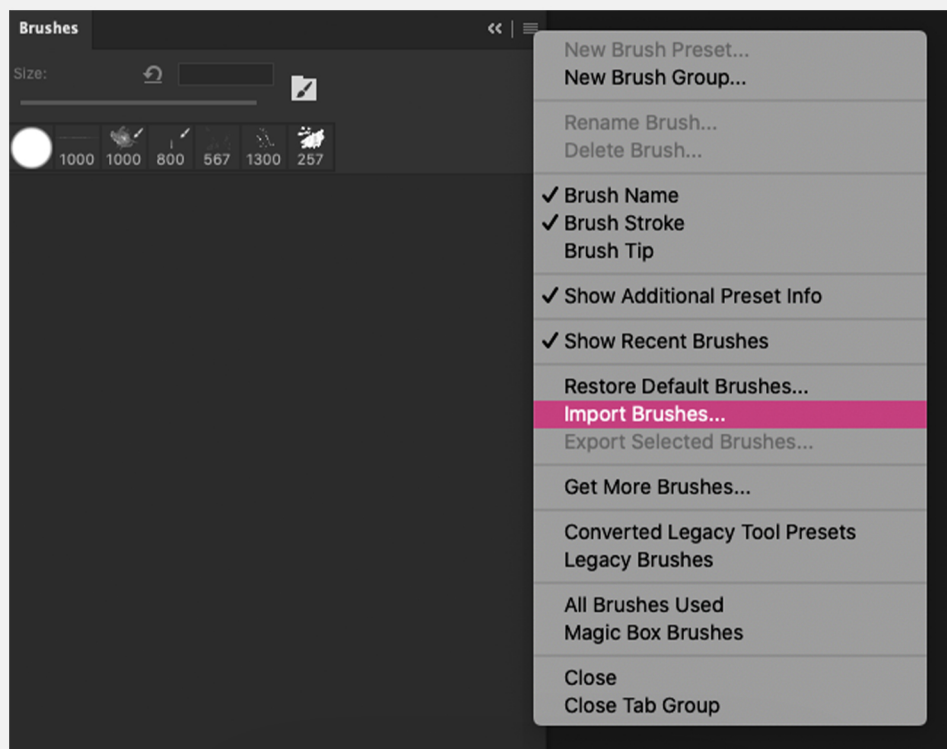

02. Use the **Quick Selection Tool**  to select an object in your image, then copy and past it in a new empty layer and name it “ **mask** ”.

03. If you have Photoshop CC2020 or CC2021, you can use the new perfect tool **Object Selection Tool**  to detect a specific object in your image, then copy and past it in a new empty layer and name it “ **mask** ”.

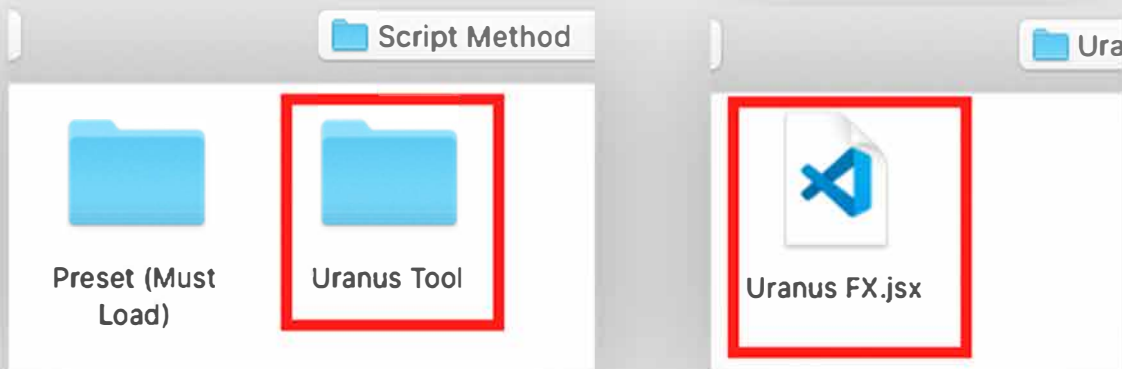

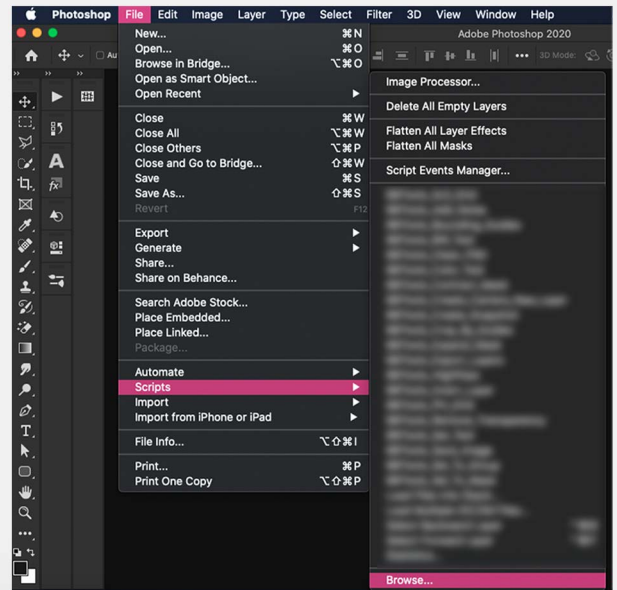

02. Load the preset:

The effect needs the brushes file that come with it, you need to load them before apply the effect, to do that open the brushes panel from: **Window >> Brushes**, from this panel click on the small menu icon  in the top right corner, and choose **Import Brushes**, browse the “ **Uranus Brushes.abr** ” file and click open.

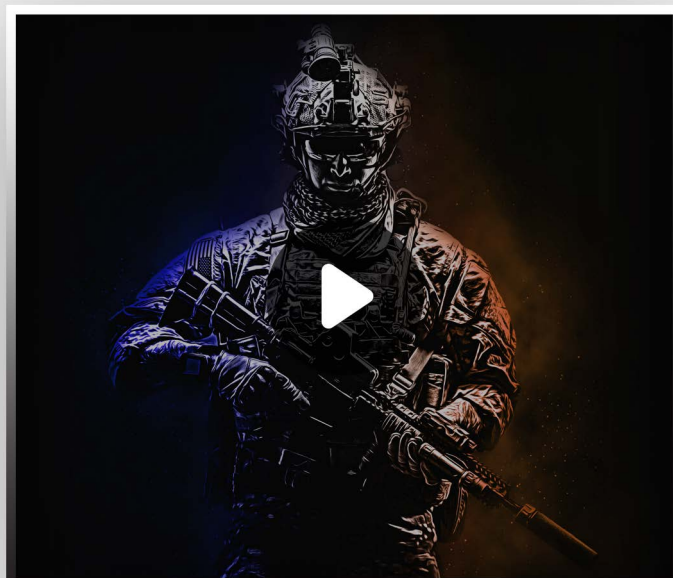

03. Apply the effect:

After you preparing the image and the mask and you load the brushes file, it's time to load the script to let the effect process begin, go to:
File >> Scripts >> Browse, then browse the script file “ **Uranus FX.jsx** ”, and photoshop will begin the process automatically, just wait a few minutes and do nothing until the effect finished it's process (30 - 80 seconds).

for best using experience of how to install and edit final result, watch the video tutorial below:
