

How to Use

PC Version (XMP files):

1. Buy pack from envato.
2. Download pack from envato.
3. Open Lightroom
4. Go to Develop Menu
5. On the left side you see "Preset" category
you can see a + beside to "preset"
Press the + button after select "Import Preset".
And select presets folder.

Mobile Version (DNG files) :

1. Buy pack from envato.
2. Download pack from envato.
3. You need to transfer DNG Files on your phone.
You can use WeTransfer or SendAnywhere apps.
4. After you have presets on your phone, open Lightroom
(presets was appear on your lightroom library "all photos")
Click on the DNG files from your library.
Now the dng file was open on your lightroom.
On the right side of the top. You have 3 dots (...)
After you press the dots a menu appears in which
you have a "create preset" option.
Press "create preset" After this u have a windows
with some option check all the options excep "tools, optics
and Geometry") And on the top you can give a
name for your preset.
After you press the save button on the right top.
The preset will appear in your "preset section"
and now you can use the presets on your photos.

if you have any Quastion please send me a message on envato
Have fun!
