

Presets Installation Guide!

Mobile Installation

Step 1

Locate the "**Mobile**" folder.

Step 2

Right click on the file and click **Download**.

Step 3

Once downloaded, click on the icon in the top right-hand corner & "**save as image**." This will save them to your camera roll.

Repeat this for each DNG file.

(Please note, the file image will look blank in your camera roll – this is normal because it is a Raw File – this is Not a problem.)

Step 4

Open the Lightroom app & click on the image+ icon to import the preset you downloaded to your phone. Select the DNG files you just downloaded from your Camera Roll and import them into the App.

Step 5

Click on the DNG file you just imported to Lightroom and click on the 3 dots “. . .” on the top right corner and Select "**Create Preset**".

Name it whatever you like and click the mark to Save.

Do this for each DNG file imported.

Step 6

Click on the image you wish to edit. Select "**Presets**" from the bottom panel slider & select the preset you want to use for your image.

If you do not see "**User Presets**" click the down arrow next to "**Color**" & select "**User Presets**".

Desktop Installation

Step 1

Locate the "**Desktop**" folder

Step 2

Right click on the file and click **Download**.

Step 3

Locate your presets from your "**Download**" folder and click on them.

Step 4

Open Lightroom. In the "**presets**" panel click the "+" icon. Click "**import presets**".

Step 5

Your presets can now be found in the preset panel.

Enjoy your new presets!

Please DM @presetbygovindarumi if you have any difficulty during installation.
